Shortcuts: To completely shut down an application, select $\text{⌘} + Q$. To close the window you are currently viewing, select $\text{⌘} + W$. Going in a program's menus should show the shortcuts associated with the actions.

Tip

Other interesting shortcuts include $\text{⌘} + \text{Space Bar}$ to show the Spotlight search box, $\text{⌘} + Z$ for Undo and $\text{⌘} + \text{Shift} + Z$ for Redo. Note that shortcuts for applications might differ depending on the application and that a program might be using a shortcut that had an action already associated with it. By searching in the options and menus of a program that has an interfering shortcut or by going in the System Preferences, then in Keyboard & Mouse, then in Keyboard Shortcuts, you might find a place to change that shortcut.
